TANUSH YADAV

Bengaluru, India • +91 6394504298 • tannushtnn@gmail.com • LinkedIn • GitHub • Portfolio

PROFESSIONAL OBJECTIVE

Motivated Computer Science undergraduate with strong C++ foundations and hands-on full-stack web development experience. Passionate about building clean, functional applications and eager to contribute to a collaborative engineering team while growing as a developer.

EDUCATION

B.Tech — Computer Science & Engineering 2024 – 2028
Nitte Meenakshi Institute of Technology (NMIT), Bengaluru | CGPA: 8.23 / 10 (Semester 1–4)

Higher Secondary (Class XII) Completed 2024
Deoria Senior Secondary School, Deoria, Uttar Pradesh

TECHNICAL SKILLS

Languages: C++ (Proficient) | JavaScript | Python | MySQL

Web Technologies: Next.js | React | TypeScript | HTML | CSS | Tailwind CSS

Core CS: Data Structures & Algorithms | OOP | DBMS | Operating Systems | Computer Networks

Tools: Git | GitHub | VS Code | Node.js | pnpm

PROJECTS

Attendance Prediction & Calculator System | GitHub | Live Demo
C++ | OOP | Algorithm Design

- Built a C++ tool to compute current attendance percentage and simulate future scenarios based on upcoming class schedules.
- Calculates the minimum classes needed to meet the 75% threshold, helping students plan proactively.
- Applied OOP principles — encapsulating logic in modular classes for maintainability and easy extension.
- Deployed a live web version for interactive use, accessible at attandance-ochre.vercel.app.

Heart Attack Analysis | GitHub | Live Demo
Python | Data Analysis | EDA | Data Visualisation

- Built a Python data science mini project analysing a heart attack dataset to identify key risk factors.
- Applied preprocessing, exploratory analysis and visualisation to draw clear, interpretable insights.

The Food Bridge | GitHub
TypeScript | Vanilla JS | Vite

- Built and publicly launched a web platform connecting surplus food sources (restaurants, kitchens) with NGOs and shelters to reduce food wastage and support communities in need.
- Designed a clean, functional UI to streamline the donation-matching process between food sources and recipient organizations.
- Developed using TypeScript and Vanilla JS with Vite for a fast, lightweight build and development workflow.

Idol Chat Web App | GitHub
Next.js | TypeScript | React | Tailwind CSS | REST API

- Built a full-stack web app where users can have real-time AI-powered conversations with virtual personalities of their favourite celebrities.
- Architected with Next.js App Router and TypeScript for type-safe, performant rendering and clean component structure.
- Implemented custom React hooks to manage stateful chat logic, keeping business logic separate from UI components.
- Structured codebase across modular directories (app/, components/, hooks/, lib/) following industry-standard Next.js conventions.

ACHIEVEMENTS & ACTIVITIES

- Co-Lead of Operations, Club NEXORA, NMIT — contributing to technical events and peer learning programmes.
- Hackathon Participant, NMIT — built solutions under time pressure in a team environment.
- Workshop Participant, Kodeus × Ox.day Technical Workshop, NMIT — hands-on exposure to industry tools.
- Maintained 8.23 CGPA across 4 semesters while simultaneously building multiple side projects.
